Exam : CEA-C01

Title : Alibaba Cloud Certified
Associate: Cloud Engineer

Version : DEMO

1.Which of the following best describes the main advantage of using Alibaba Cloud CDN?

- A. Increased latency
- B. Higher data storage costs
- C. Limited geographic reach
- D. High availability and faster content delivery

Answer: D

2.An object stored in OSS is accessible through 'https://photos-bucket.oss-ap-southwest-1.aliyuncs.com/workflow.png'.

What is the key of the object?

- A. oss-ap-southwest-1.aliyuncs.com
- B. photos-bucket
- C. workflow.png
- D. https

Answer: C

3.What are the challenges in monitoring a monolithic app compared with a microservices-based app?
(Choose all that apply.)

- A. Monolithic apps have loosely coupled dependencies, making it hard to identify specific issues and their root cause
- B. Most metrics of a monolithic app are aggregated at the app level, making it hard to obtain fine-grained information
- C. Metrics for each component of a monolithic app are easy to obtain
- D. It is hard to diagnose the cause of issues in a monolithic app when it runs into an error or crashes

Answer: BD

4.In what way can CloudMonitor's real-time monitoring capabilities affect incident response?

- A. It allows for immediate identification and resolution of issues
- B. It solely provides historical context
- C. It requires manual checks that are time-consuming
- D. It slows down reactions to incidents

Answer: A

5.CloudMonitor alerts can only be set for ECS metrics.

- A. True
- B. False

Answer: B
