Exam : CSA-C01

Title : Alibaba Cloud Certified
Associate: Cloud Security
Engineer

Version : DEMO

1.A company is migrating several applications to Alibaba Cloud. The security team wants to clarify which task is typically the customer's responsibility under the shared responsibility model.

Which task should the customer handle?

- A. Replacing failed physical disks in Alibaba Cloud data centers
- B. Maintaining the power supply of the underlying facilities
- C. Securing the operating system, applications, and data
- D. Managing the physical access controls of cloud regions

Answer: C

2.A developer only needs to view logs for troubleshooting, but the administrator grants the developer full permissions to all cloud resources.

Which security principle is being violated?

- A. Defense in depth
- B. Separation of duties
- C. Data minimization
- D. Least privilege

Answer: D

3.A company protects its workloads by using RAM policies, security groups, Cloud Firewall, Security Center, KMS, and ActionTrail together.

Which security concept does this best represent?

- A. Single sign-on
- B. Defense in depth
- C. Elastic computing
- D. Resource tagging

Answer: B

4.A security administrator needs to investigate who deleted an ECS instance and when the operation occurred.

Which type of control is most relevant?

- A. Audit logging
- B. Web traffic acceleration
- C. DNS load balancing
- D. Image replication

Answer: A

5.A company runs a public-facing website on Alibaba Cloud. The application must be protected against SQL injection and cross-site scripting attacks.

Which service category should be used?

- A. Host baseline assessment
- B. Key management
- C. API operation auditing
- D. Web application protection

Answer: D
