Exam : HPE0-G04

**Title : HPE Morpheus Certified
Administrator Exam**

Version : DEMO

1.How does Morpheus support high availability (HA) deployments?

- A. By configuring multiple Morpheus appliance nodes
- B. By running a single appliance in a data center
- C. By requiring an external load balancer
- D. By limiting support to cloud-based deployments

Answer: A

2.What are best practices for configuring Morpheus after installation? (Select two.)

- A. Limiting API access for automation
- B. Setting up integration with cloud providers
- C. Disabling built-in security features
- D. Configuring role-based access control (RBAC)

Answer: BD

3.What are the benefits of integrating GitHub with Morpheus? (Select two.)

- A. Enabling Infrastructure as Code (IaC) automation
- B. Ensuring version-controlled configuration management
- C. Restricting automation to pre-built templates only
- D. Disabling manual configuration options

Answer: AB

4.How can administrators control access to Infrastructure Groups in Morpheus?

- A. By manually assigning permissions to each resource instance
- B. By limiting access to a single user role
- C. By enforcing predefined group structures
- D. By configuring role-based access control (RBAC) settings

Answer: D

5.What is the primary purpose of self-service catalog items in Morpheus?

- A. To allow users to request and provision pre-configured applications and services
- B. To restrict provisioning to administrators only
- C. To automate cloud infrastructure upgrades
- D. To limit the use of Infrastructure as Code (IaC) workflows

Answer: A
