Title : Hitachi Vantara VSP 360
Storage Administration
Professional

Version : DEMO

1.What role does cache memory play in a Hitachi VSP system?

- A. Permanent data storage
- B. Temporary acceleration of read/write operations
- C. Host authentication
- D. Volume path mapping

Answer: B

2.Which feature differentiates VSP 360 Fleet Management from managing individual storage systems separately?

- A. Host multipathing configuration
- B. Unified view across multiple storage systems
- C. Operating system patch automation
- D. Application performance monitoring

Answer: B

3.Which server attachment technologies are commonly managed in VSP environments? (Select all that apply)

- A. Fibre Channel
- B. iSCSI
- C. SATA direct attach
- D. NVMe over Fabrics

Answer: ABD

4.An administrator wants to integrate storage provisioning into an external orchestration platform.

Manual GUI-based configuration is no longer efficient at scale.

Which interface is most appropriate for this requirement?

- A. Graphical dashboard only
- B. Platform REST API
- C. Storage system firmware console
- D. Host multipathing utility

Answer: B

5.What is the primary role of Hitachi Dynamic Link Manager?

- A. Creating storage pools
- B. Providing host multipathing and load balancing
- C. Managing user authentication
- D. Performing data replication

Answer: B
