Exam : **I27001F**

Title : Certified ISO/IEC 27001:2022 Foundation

Version : DEMO

1.What details must be included in a Statement of Applicability?
A. Justification for the exclusion of controls
B. Justification for the inclusion of controls
C. The controls considered necessary
D. All of the above
Answer: D
Explanation:
In ISO/IEC 27001:2022, the Statement of Applicability is a required documented output of the information security risk treatment process. It must contain the necessary controls, including whether they are implemented, and the justification for their inclusion. It must also include justification for excluding controls from Annex A when they are not applicable. Therefore, all three elements listed in options A, B, and C are part of a proper Statement of Applicability, making option D the correct answer.

2.According to ISO/IEC 27001:2022, is it necessary to ensure that successive information security risk assessments produce consistent, valid, and comparable results?
A. It is only an observation to keep in mind when auditing the management system
B. It is a requirement to be fulfilled
C. It is a recommendation, but not a requirement
D. None of the above
Answer: B
Explanation:
ISO/IEC 27001:2022 requires the organization to define and apply an information security risk assessment process that produces consistent, valid, and comparable results. This is not optional guidance and not merely an auditing suggestion. It is a formal requirement within the planning and risk assessment requirements of the standard.
Therefore, option B is correct.

3.What does ISO/IEC 27001:2022 require for the control of documented information?
A. Control documented information so that it is available and suitable for use, where and when it is needed
B. Acquire a technological tool to control documented information effectively
C. Have an internal auditor validate that documented information control is performed externally
D. Hire a consultancy to determine how documented information should be controlled in order to achieve certification
Answer: A
Explanation:
ISO/IEC 27001:2022 requires documented information to be controlled so that it is available and suitable for use where and when needed, and adequately protected. The standard does not require purchasing software, hiring consultants, or assigning external validation as mandatory conditions for compliance. Those may be organizational choices, but they are not requirements of the standard.
Therefore, option A is the correct answer.

4.Which of the following options should be included in the ISMS policy?
A. The name of the intrusion detection system

B. The company history and the motivation for implementing the ISMS
C. The information security objectives
D. The results of previous audits
Answer: C
Explanation:
Under ISO/IEC 27001:2022, the information security policy must be appropriate to the purpose of the organization, include information security objectives or provide the framework for setting them, and include a commitment to satisfy applicable requirements and to continual improvement of the ISMS. The standard does not require technical product names, company history, or prior audit results to appear in the policy.
Therefore, option C is the best and correct answer.

5.In ISO/IEC 27001:2022, what does the information security risk assessment process refer to?
A. Identifying risk owners
B. Identifying information security risks
C. Establishing and maintaining information security risk criteria
D. All of the above
Answer: D
Explanation:
ISO/IEC 27001:2022 requires the organization to establish and maintain information security risk criteria, identify information security risks, and identify risk owners as part of the risk assessment process. These activities are core elements of clause 6 on planning and risk assessment. Since all of the listed options are required parts of the process, the correct answer is D.
